

Calculation of Licence EFTS

Tāwhia Copyright Aotearoa (TCA) licences for education organisations use the Equivalent Full-time Students (EFTS) methodology for calculating annual licence fees. This method does not apply to primary and secondary school licences, which instead use a simple student headcount. Once every year licence-holders will be asked to advise TCA of their current EFTS.

Calculating EFTS

EFTS can be calculated based on learning hours using the below equation.

EFTS = total hours for a course (i.e. days/weeks multiplied by hours) multiplied by the number of students divided by 1200

Total hours include:

- Class, lecturer, and tutor contact hours, including workshops and tutorials
- Tests and assignments
- Supervised practical placements
- Study time
- Self-directed learning with tutorial support available
- Assessment time

Where available, licence-holders may use the EFTS figure provided to NZQA.

Example of an EFTS calculation

If a course is 40 weeks long, there are 30 learning hours per week, and 15 students enrolled in the course: $40 \times 30 \times 15 = 18,000$ learning hours, divided by 1200 = 15 EFTS.

Minimum fee thresholds

A minimum fee may apply where EFTS are below the minimums given in some licences.
